DETAILED ACTION

Allowable Subject Matter

1. **Claims 12, 20 and 21** (now respectively renumbered 1 - 3) are allowed. The following is an examiner's statement of reasons for allowance:

The closest prior art teaches a digital camera system that includes a digital camera and a cradle on which the digital camera is mounted where the cradle comprises: a movable portion; a signal generating device which generates a command signal for changing functions of the digital camera according to a position of the movable portion; and a signal transmitting device which transmits the command signal generated by the signal generating device to the digital camera; wherein the digital camera comprises: a signal receiving device which receives the command signal generated according to the position of the movable portion of the removable cradle; and a mode control device which changes operation modes of the digital camera according to the command signal transmitted from the cradle; where the system further comprises a charge control device which, when the digital camera is mounted on the cradle and powered down, automatically sets a charge mode where a battery in the digital camera is charged by power supplied through the removable cradle

However, the closest prior art does not teach or fairly suggest a digital camera system in which a digital camera is connected to communicate with external equipment when the camera is removably mounted on a cradle, wherein the cradle comprises: a tilt angle changing device which changes a tilt angle of the digital camera mounted on the cradle; a determination device which determines a change in the tilt angle of the digital camera by the tilt angle changing

device; and a command device which outputs a function change signal to the digital camera according to a determination result of the determination device, wherein the digital camera changes functions for the external equipment according to the function change signal received from the command device, and said system further comprising a charge control device which, when the digital camera is removably mounted on the cradle with the digital camera being powered down, automatically sets a charge mode where a battery in the digital camera is charged by power supplied through the cradle.

2. Any comments considered necessary by Applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
